

## Modular Millwork® for Effective Learning Interiors

Modular Millwork® is ideal for classrooms, labs, teacher workrooms, art and ceramics classes, modeling labs, administrative offices and most any active learning interior.

The inherently modular design allows Modular Millwork to fit most any application and space where traditional built in millwork or case goods have previously been the only alternatives.

Made in the USA, the product uses 100% recycled wood, Greenguard® certified components and powder coat paint finishes and is backed by an industry leading “Lifetime Warranty” to ensure a durable and long-lasting asset for institutional uses.

Modular Millwork is the “Cost Neutral” Green alternative because of its leading edge green design and manufacturing concepts...yet it costs no more than traditional millwork or interiors.

Easy to reconfigure whenever rooms, space or teaching formats change, Modular Millwork can be continuously repurposed and reconfigured to keep pace with ever-changing learning formats and technology that must be incorporated into the instructional curriculum.

The wide selection of designer finishes, surfaces and formats let you specify Modular Millwork to fit your exact needs, and expert design assistance and project support is offered through a nationwide dealer network.
